OVERVIEW

I am a theoretical astrophysicist who applies physical laws to understand astronomical phenomena. My primary research interest is studying the physics and chemistry of the middle and upper atmosphere of gas giant exoplanets, as well as their escape, through both the analysis of observations and theoretical modeling. Additionally, I have constructed an interior structure model of terrestrial exoplanets to constrain their compositions, and a radiative transfer model to study the physics of interacting supernova remnants.

EMPLOYMENT

Associate Astronomer Shanghai Astronomical Observatory, CAS	2023-
<ul style="list-style-type: none">• Atmosphere of gas giant exoplanets and their escape.• Characterize the interior structure of terrestrial exoplanets.	
Postdoctoral Research Associate University of Arizona	2019-2022
<ul style="list-style-type: none">• Characterize exoplanet upper atmosphere using its atomic absorption features.	
Postdoctoral Scholar University of Nevada, Las Vegas	2017-2019
<ul style="list-style-type: none">• Model the interior structure of terrestrial super-earth planets.	

EDUCATION

Ph.D. in Astronomy University of Virginia, Charlottesville, VA “Spectral Line Formation in Hot Jupiter Atmospheres and in Interacting Supernovae” Thesis advisor: Arras, Phil / Chevalier, Roger	2011-2017
B.S. in Physics Peking University, Beijing, China	2007-2011

PEER-REVIEWED JOURNAL PAPERS [\[ADS publication list\]](#)
